

Intermediate list

The database provides mortality data for three different cause-of-death classification schemes: a short list, an intermediate list, and a long list. This is the intermediate list, which groups causes of death into large categories that can be traced through historical revisions of the International Classification of Diseases (from ICD6 to ICD10). The list includes 58 categories. Two of these categories are used for deaths of ill-defined causes (see below).

** For the reconstructed series, but not for the series in the original classifications ill-defined and unknown causes of death (ICD10 codes R00-94, R96-R99) were redistributed among the other causes of death. A detailed description of the redistribution methods used is provided in the country specific "Background and Documentation" files. The total number of death counts which have been redistributed is given for each country in the individual "Ill-defined death counts" files.*
